

Sprinkler Repair Austin

Sprinkler Repair Austin

Hill Country Rainmakers can repair your sprinkler system. All of our technicians are trained in all aspects of sprinkler system repair including. Hill Country Rainmakers technicians focus on fixing your problem right the first time and providing superior customer service. In addition, Hill Country Rainmakers can renovate your existing system.

Sprinkler System Installations

Hill Country Rainmakers recognizes that although each site is unique, all superior sprinkler systems possess the same features:

Each sprinkler system design begins with a site visit by one of our Design Professionals. The site is measured and an inventory of any existing vegetation is identified. Once a scaled drawing of the site is complete, we prepare an efficient sprinkler system design utilizing water supply and pressure, soil type, planting materials and weather conditions. It is important to remember that a system must be customized to best suit your property requirements. Your watering schedule will also be planned to minimize waste caused by runoff, wind drift and evaporation. We design our systems to put down the maximum amount of water evenly in the shortest amount of time. While other sprinkler heads may seem to cover a greater distance, they may not be putting down enough volume of water. In drought situations, where watering times are limited, this aspect becomes extremely important.

Landscaping

Hill Country Rainmakers offers landscape design and installation for both Residential and Commercial properties. Each landscape we construct is a unique reflection our client's personality relative to their property. This is accomplished through careful listening and observation. We will develop a written plan, constructing the landscape according to that plan. This is achieved through collaboration with the client, designer and our talented, professional crews. In addition, we maintain a relationship with many talented outdoor professionals and can provide design and installation services for decks, pools, outdoor kitchens, fencing, lighting, etc.

Sprinkler system Maintenance

Hill Country Rainmakers provides many options for sprinkler system maintenance. Like your car, your sprinkler system performs best when it is properly maintained. Common maintenance includes inspecting and adjusting spray heads, controller programming, system winterization and spring start up, backflow device testing, etc. Our professionals can provide monthly, quarterly, bi-yearly, or yearly services for your sprinkler system.

Backflow Preventer Testing and Repair

Hill Country Rainmakers' Licensed Backflow Prevention Assembly Tester can test or repair your backflow prevention device. Water safety is serious business. Regular testing by a qualified tester is an essential part of protecting yourself and your community from the contamination of our drinking water. There are several types of testable backflow prevention assemblies in use. The most commonly used are double check valves, pressure vacuum breakers and reduced pressure zone assemblies. Hill Country Rainmakers can perform the required test and provide certification to you and your water supplier.

Quality, Outstanding customer service, reliable

Hill Country Rainmakers was established in October of 2007 by Brian Findeisen. Brian grew up on the family farm in Southeast Texas helping his father and grandfather grow corn, milo and peanuts and raise cattle. It was there that he learned about plant propagation, water conservation and the meaning of hard work. Brian has a degree in microbiology from Texas State University and worked in a research laboratory for over 10 years. In 2006, Brian longed to work where he could be outdoors. He went back to school to expand his existing knowledge by taking courses in landscape design, horticulture and irrigation system design. He is a Licensed Irrigator and Licensed Backflow Assembly Tester. Brian and his wife, Nicole, have been married for 12 years and they have two sons. When he is not working, Brian enjoys camping, fishing and hunting with his boys.

When Brian formed Hill Country Rainmakers, his goal was to deliver efficient sprinkler systems using quality materials and superior workmanship. He utilizes water saving practices in his designs to ensure his sprinkler systems provide sufficient coverage without waste. These techniques save the home owner money for years to come.
